SUMMARY

I build and ship web applications that are meant to be used, not just showcased. My focus is on creating clean, responsive interfaces, working with live APIs, and improving how products feel in real-world usage. I learn best by building complete projects and deploying them, and I'm looking for an opportunity where I can contribute to real systems while growing as a frontend-focused developer.

EDUCATION

L.J University

Bachelor of Computer Applications (BCA) — SPI: 8.13

Ahmedabad, Gujarat

2023 – 2026

F.D High School

Higher Secondary (12th) — 71.71%

Ahmedabad, Gujarat

2023

PROJECTS

CryptoPulse – Crypto Tracker

HTML, CSS, JavaScript, Public Crypto API

[GitHub](#) | [Live](#)

- Built a lightweight crypto tracker displaying **real-time** cryptocurrency prices.
- Integrated public crypto APIs using fetch and async/await.
- Designed a clean, responsive dashboard focused on performance and usability.

RepoScout – GitHub Repository Finder

HTML, CSS, JavaScript, GitHub Search API

[GitHub](#) | [Live](#)

- Developed a tool to discover GitHub repositories using the GitHub Search API.
- Enabled users to explore random repositories by language and topic.
- Implemented async API handling, UI state management, and responsive design.

Weather Dashboard

HTML, CSS, Vanilla JavaScript

[GitHub](#) | [Live](#)

- Built a fully responsive weather dashboard with real-time weather data.
- Integrated a live weather API to display temperature, conditions, and forecasts.
- Implemented clean UI, dynamic rendering, and error handling for invalid locations.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, PHP, MySQL, Java, C programming.

Frameworks / Tools: Bootstrap, Laravel, Git, GitHub, MySQL, VS Code, Vercel, Railway, Render.

Other: Responsive Web Design, REST API Integration, Hosting & Deployment.
